**DETAILED ACTION**

***Information Disclosure Statement***

1. The information disclosure statement filed with the instant application has been received and considered.

***Claim Rejections - 35 USC § 112***

2. Claims 1-3 rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. It is unclear how a braking force can be exerted on the sheave by the pressing plate if the brake disc 21 and pressing plate 23 both rotate with the sheave 16, as shown in figure 3. See line 12 of claim 1.

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-3 rejected under 35 U.S.C. 103(a) as being unpatentable over Japanese publication 5-147890 (JP '890) in view of WO03062115 (WO '115).

Regarding claims 1-3 JP '890 shows in figures 1- 4 a sheave 7, car and counterweights 4,5, an engaging device 27-29 and what appears to be a braking

arrangement at 25. Note that due to the gearing arrangement as seen in figure 1 the rotating disc assembly shown in figure 2 will rotate with the sheave 7.

Lacking in JP '890 (as best understood) is a showing of the specifics of the brake assembly.

This is more clearly shown in WO '115 at 46. In the U.S. publication equivalent document US 2006/0151254 please see the discussion in paragraph [0002] and [0016].

One having ordinary skill in the art at the time of the invention would have found it obvious to have modified JP '890 with an electromagnetic brake assembly, as taught by WO '115, simply as the substitution of one well known brake arrangement for (presumably) another, as it is well known to provide Hoists/elevators with emergency brakes.

### ***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
